EXPERIENCE

Software Developer

Jan 2024 – Present

Lyxel Labs Private Limited

Gurugram, Haryana

- Developed and revamped Weavr Sense, integrating databases across servers using custom APIs.
- Improved data retrieval speed by 25% by optimizing MongoDB queries and API structure.
- Led development of MongoDB models and scrapers in the automation pipeline.
- Collaborated with frontend and data teams for seamless integration.
- Streamlined scraping automation using Celery, reducing manual effort by 40%.
- Currently integrating MCP server capabilities using LangChain for enhanced agent-based workflows.
- Mentored multiple interns and supported new developer onboarding by sharing backend architecture insights and best practices, facilitating smooth integration into the team.

Backend Developer

Mar 2023 – Aug 2023

Freelancer

Remote

- Developed an Inventory Management System using NodeJS, MongoDB, and ExpressJS.
- Reduced inventory update time by 35% via optimized CRUD logic and schema design.
- Implemented multi-user access with hierarchical role-based permissions.
- Integrated NodeMailer for automated notifications; added full user-action logging.
- Delivered end-to-end solution, aligning features directly with client needs.

TECHNICAL SKILLS

Languages: Python, JavaScript, Shell Scripting, SQL

Backend Frameworks: Flask, FastAPI, Tornado, Falcon, ExpressJS, NodeJS, Mongoose

Libraries & Tools: LangChain, Celery, pandas, NumPy, PyTest, Jest, OpenAI APIs, FAISS

Databases: MongoDB, MySQL

Developer Tools: Git, VS Code, PyCharm, Postman, Docker, CUDA

EDUCATION

Bennett University

Greater Noida, Uttar Pradesh

Bachelor of Technology in Computer Science and Engineering

Sep 2020 – Jun 2024

- *Content Writer IEEE BU, 2020 to 2021*
- *8.9 CGPA*

PROJECTS

SMTP Honeypot | *Python, smtpd, Async*

Mar 2023

- Developed a honeypot server using Python and the smtpd library to capture and log suspicious email activity.

Twitch Watcher Discord Bot | *Docker, Python, Discord, Requests*

Jan 2023 – Feb 2023

- Built a bot to streamline server interactions and automate RLCS loot claiming on Twitch.
- Deployed using Docker for consistent performance and environment isolation.

Remote Intensive Care Application | *Python, Flask, SQLite, PyTest*

Oct 2021 – Dec 2021

- Built a web-based ICU system using agile methods, boosting efficiency by 30%.
- Optimized database queries and schema to improve data retrieval speed by 40%.
- Implemented test suites using PyTest to ensure API reliability and performance.
